

Application of HB-101

Pulse, such as soybeans, kidney beans, fava beans, peas and black beans

1. Soil improvement
Dilute HB-101 by 1,000 to 10,000 times with water and irrigate 1 to 3 times between the previous harvest and the next planting.
2. Preparing seeds
Soak seeds in the HB-101 diluted solution for 10 seconds.
3. Cultivating nursery plants
Spray the HB-101 diluted solution on the nursery plants once a week for 3 weeks.
4. From planting to harvest
Spray the HB-101 diluted solution on the leaves or irrigate with an irrigation pipe once every 3 days to every 2 weeks depending on conditions, from planting to harvest.
